## DETAILED ACTION

### *Response to Amendment*

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4, 6-8, and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Doornhein et al. (6,078,360).

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Regarding claim 1, Doornhein discloses a television receiver (Figure 4) showing a step of receiving an analog picture signal (43) and a quality indication relating to the analog picture signal (aspect ratio static control information bits), and a step of

Art Unit: 2614

processing the analog picture signal in dependence on the quality indication (49). The aspect ratio information meets the quality indication signal as claimed because a television image quality can be determined based on its aspect ratio. Conventionally, aspect ratio of 4:3 indicates standard signal while 16:9 indicates HDTV.

Regarding claim 2, the processing device 49 in Doornhein meets the claimed picture enhancement operation because it is capable to compress or expand the received television signal based on the aspect ratio information.

Regarding claim 3, the expansion and compression operations enhance the picture sharpness and/or contrast because they involve interpolation and decimation operations.

Regarding claim 4, the processing device 49 inherently reduces noise or encoding artifacts since a low pass filter is being used (see incorporated reference U.S. Pat. No. 5,627,592).

Regarding claims 6, 7, 8, and 10, see corresponding rejections as set forth above.

#### ***Allowable Subject Matter***

4. Claims 5, 9, 11-13 are allowed.

#### ***Response to Arguments***

5. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2614

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tichelaar et al. (5,627,592) is an reference incorporated in Doornhein et al.
